

Short Tail, Curved Tail

Quite a few breeds of cats have a short or curved tail, but the Japanese Bobtail's is usually short and round.

Some tails are about 5 inches long, some about 2 inches. And with some, the tip has a natural right-angle bend.....

Ideal Japanese Bobtail

Here's my
black and white cat.
6-inch-long tail

My brown tabby cat
2-inch-long tail
The tip curves around.

Some country grannies say it's "unusual" to see cats with long, straight tails. Well, it doesn't seem to bother the *cats* that their tails are long or curved!

My long-haired cat
It's hidden by the long hair,
but the tail is bent at a right angle.
